## Education

**Indian Institute of Information Technology, Surat**

Bachelor of Technology in Computer Science

2023 - 2027

CGPA - 8.60

## Projects

**AI-Based Apparel Size Estimation System** | FastAPI, Python, OpenCV, YOLOv8, MediaPipe, MongoDB, WebSockets

- Developed a real-time AI-powered shirt size estimation system using computer vision and deep learning pipelines for automated apparel fitting analysis.  
Implemented a FastAPI backend with WebSocket-based real-time communication to process live video frames with low-latency inference and prediction streaming.  
Integrated YOLOv8 for person detection, MediaPipe for body landmark extraction, and custom measurement logic to estimate shirt sizes with confidence scoring and fit-type classification (Slim, Regular, Relaxed).  
Built an end-to-end processing pipeline with frame buffering, smoothing algorithms, annotated frame visualization, and MongoDB-based session tracking for storing prediction history and analytics.  
Optimized image preprocessing, resizing, and inference workflows using OpenCV, NumPy, and PyTorch to support scalable real-time performance across webcam/video inputs.

**Pizza Time** | HTML, CSS, JS, React

- Dynamic Menu System: Utilizes React Hooks (useState, useEffect) to fetch and render pizza data dynamically.  
Advanced Cart Logic: Implemented a robust shopping cart using Redux Toolkit (or Context API) to handle quantity updates, price calculations, and item persistence.  
Responsive Design: A custom-styled UI using CSS Modules and Flexbox/Grid to ensure a pixel-perfect layout across desktop, tablet, and mobile screens.  
Form Validation: Integrated JavaScript regex and validation logic for the checkout process to ensure accurate user data collection.  
Performance Optimization: Leveraged React.memo and lazy loading for high-resolution food imagery to maintain a high Lighthouse performance score.

**Mynta Clone** | HTML, CSS, JS

- Developed a responsive fashion e-commerce web application using HTML, CSS, and JavaScript with a focus on modern UI/UX design.  
Implemented user authentication system with OTP verification and email/password login, utilizing local storage for session management.  
Designed interactive product listing pages with filtering, sorting, and dynamic content rendering for an enhanced user experience.  
Built reusable UI components such as navigation bar, product cards, and cart interface to ensure consistency across pages.  
Optimized front-end performance and responsiveness to ensure smooth functionality across different devices and screen sizes.

## Technical Skills

**Languages:** C++, C, Python, HTML, CSS, JavaScript

**Technologies/Framework:** React, Bootstrap, Numpy, Pandas, ML, FastAPI

**Databases:** MySQL

**Relevant Coursework:** Data Structure and Algorithm, OS, WEB Development, Computer Networks

**Soft Skills:** Communication, Adaptability
